

Roche Channel Fix Electric Projection Screens

This range of projection screens are made using only the best quality materials. The triple laminated glass fibre surface is designed to lay flat with no curls extending into the viewing area. The viewing angle is very wide and the black border all around marks the image and improves your perception of the contrast ratio. The screen fabric has black backing meaning you can place the screen in front of a window and no light will come through the projector screen fabric. This electric screen is supplied with an IR remote control for easy operation. Fitting onto a plaster wall or ceiling is simplicity itself, thanks to the unique channel fix brackets - featuring sliding rear brackets with quick attach fixings.

- A picture enhancing black border which will frame the image for an excellent viewing experience.
- Supplied with an IR remote control & IR extender so that the screen can be recessed or out of sight.
- Supplied with bear end cables for RS232 and contact closure control.
- The remote control will operate the screen up to 8m away.
- Energy saving with the ultra low power consumption.
- Only 45 Decibels.
- Sleek white aluminium casing will allow a discreet installation in any environment.
- Channel fix brackets allow the Screen to be wall or ceiling mounted at any position along the casing.
- 2.7m of power cable with a standard UK power plug.
- Excellent Quality - backed by an outstanding 3 year warranty.
