

## **Roche 16:10 CHANNEL FIX Manual Projection Screens**

This range of projection screens are made using only the best quality materials.

The triple laminated glass fibre surface is designed to lay flat with no curls extending into the viewing area. The viewing angle is very wide and the black border all around marks the image and improves your perception of the contrast ratio. The screen fabric has black backing meaning you can place the screen in front of a window and no light will come through the projector screen fabric.

Fitting onto a plaster wall or ceiling is simplicity itself, thanks to the unique channel fix brackets – sliding rear brackets with quick attach fixings. You will not find an easier screen to install.
