

Roche 16:9 Quality Electric Projection Screens

This range of projection screens are made using only the best quality materials.

The triple laminated glass fibre surface is designed to lay flat with no curls extending into the viewing area. The viewing angle is very wide and the black border all around marks the image and improves your perception of the contrast ratio. The screen fabric has black backing meaning you can place the screen in front of a window and no light will come through the projector screen fabric. The screen is housed in a white square steel case which has four mounting points on each end-cap to ensure the screen can be firmly fixed to the wall or ceiling. An IR remote control is included with this screen for easy operation.
