

Roche 4:3 Quality Electric Projection Screens

The thick and heavy fabric improves the flatness of the screen. The screen can be operated comfortably by using the remote control or from a wall-mounted control box. The gain factor of the screen is 1.2 so it is suitable for both LCD and DLP projectors and allows a wide viewing angle. The black back avoids loss of light and adds definition to the projected images. The black border surround improves the contrast and clarity of the picture. Included in the delivery are a control box (wall mounted), a remote control device (plus batteries), the fixings for the wall or ceiling mount as well as a user guide.
